PROFESSIONAL SUMMARY:

MSc Engineering Management graduate with practical experience in business analysis, process improvement, and project coordination across engineering and data-driven environments. Skilled in requirements analysis, stakeholder engagement and feasibility evaluation using Excel-based analysis. Seeking an entry-level Business Analyst or Project Management role to support operational efficiency and data-driven decision-making.

KEY SKILLS:

- Project Management (WBS, scheduling)
- Process Mapping & Improvement (Lean thinking)
- Data Analysis (Excel, basic reporting)
- Risk & Feasibility Analysis
- Stakeholder Communication
- Business Analysis & Requirements Gathering
- Problem Solving & Root Cause Analysis
- Methodologies: Agile, Waterfall

Tools & Technical Skills:

- Microsoft Excel
- Power BI
- SQL
- Jira

EDUCATION:

MSc Engineering Management - University of Leicester, United Kingdom (2024-2026)

Modules include - Supply Chain Management, Project Planning, Operations Strategy, Quality & Process Improvement.

B.E. Mechanical Engineering - (2018-2022) Anna University, India

Relevant Coursework: Industrial Engineering, Production Planning, Quality Control.

EXPERIENCE:

Testing Assistant Engineer (Intern) - Danfoss | Chennai, India (Jul 2024 – Dec 2024)

- Conducted testing and validation of engineering components to ensure quality standards
- Analysed test data using Excel to identify defects and support root cause analysis
- Documented results and collaborated with engineers to improve product reliability
- Contributed to process improvements by identifying inefficiencies in testing workflows

- Identified recurring component defects through data analysis, enabling corrective engineering actions that improved product reliability and reduced rework risk

ACADEMIC PROJECTS:

TARS (Smart Bag System) - Analysed user and business requirements for a smart luggage solution, including process mapping, stakeholder analysis, and risk assessment. Supported project planning activities such as WBS development, scheduling, and feasibility analysis to evaluate cost efficiency and operational performance.

Autonomous Warehouse Material-Handling Robot (AMR) - Evaluated business and operational requirements for warehouse automation by identifying workflow inefficiencies through process mapping. Contributed to WBS development, scheduling, stakeholder coordination, risk assessment, and feasibility analysis to improve operational efficiency.

Long-Duration Energy Storage Analysis – Evaluated key energy storage technologies (CAES, PHES, flow batteries), assessing scalability, cost-effectiveness, and feasibility. Delivered data-driven recommendations to support strategic decision-making for energy system optimisation.

EXTRACURRICULAR ACTIVITIES:

- Positioned as General Secretary for Robotics Club of ARM for the academic year (2021-2022).
- Attended inter-college technical contests and symposiums during the academic year (2022).

ADDITIONAL INFORMATION:

Languages: English (Professional), Tamil (Native)

Work Eligibility: Eligible to work in the UK under the Graduate Route (Post-Study Work visa) for up to 2 years
